

Garrett Manley

(404) 578-5842 | JOBS@GARRETTMANLEY.DEV | garrettmanley.com | linkedin.com/in/garrettmanley

Engineering Manager and technical architect with 8 years building customer-facing platforms at enterprise scale — leading teams, owning architecture, and delivering products used by millions across mobile, web, and cloud. Currently directing cloud architecture, security, and application delivery for PROCELL InSite, Duracell's top strategic investment for 2026, with direct executive visibility at the CEO and Berkshire Hathaway level. Brings the range of a principal engineer with the instincts of a delivery leader: shaping technical strategy, managing cross-functional teams, and pioneering systematic agentic engineering practices that measurably reduce cost, accelerate delivery, and strengthen security posture.

SKILLS

- **Leadership & Architecture:** Engineering Leadership · Solution Architecture · Cloud Architecture · Technical Roadmapping · Cross-functional Team Leadership · Agile Methodology (Scrum · SAFe · Nexus · Kanban) · Backlog Management · ADO · Jira
- **Cloud & Infrastructure:** Microsoft Azure (App Service · Azure Functions · Key Vault · Azure DevOps · Application Insights) · Azure CLI · CI/CD Pipeline Automation · Blue/Green Deployments · Firebase Analytics · OutSystems O11 · Low-Code Platform Architecture
- **Security:** Zero Trust · mTLS · PKI & Certificate Management · RBAC · FIPS 140-2 · STIG · FedRAMP · Application Security
- **AI & Agentic Engineering:** Claude Code · Model Context Protocol (MCP) · LLM Integration · Agentic Workflow Design · AI-Augmented DevOps
- **Full-Stack Development:** C# · .NET Core · ASP.NET Web API · TypeScript · Angular · Flutter · .NET MAUI · SQL · Protocol Buffers (Protobuf)
- **Design & Delivery:** Figma · UML · Sequence Diagrams · Architecture Decision Records (ADRs) · SignalR · YARP

EXPERIENCE

Duracell — DENVER, CO

Engineering Manager, PROCELL InSite (SaaS Application Manager · Manager-II) | APR 2025 – PRESENT

- **Platform Ownership & Strategic Impact:** Brought in to take full technical ownership from a struggling third-party vendor for PROCELL InSite — an enterprise IoT monitoring platform for battery-powered commercial devices deployed across facilities and maritime vessels. Rebuilt the technical foundation entirely, operating as a lean, milestone-funded startup within Duracell's portfolio. Now one of Duracell's top strategic investments for 2026, with CEO endorsement, Berkshire Hathaway backing, and recognition as a primary growth vehicle; spun out as its own business unit.
- **Cloud & Systems Architecture:** Served as architect and decision-maker for all Azure cloud infrastructure, designing, implementing, and documenting the full platform environment from zero — including App Service, Azure Functions, Application Insights, and supporting services. Provisioned through CI/CD automation, Azure CLI, and Azure MCP integrations, deliberately leveraging PaaS over container orchestration. Designed the complete backend entity-relationship model for OutSystems O11, establishing the data foundation for all current and future development. Produced ADRs, system diagrams, runbooks, and operational MOPs.
- **Security Architecture:** Designed the platform's end-to-end mTLS authentication strategy, including PKI, certificate management, and Azure Key Vault integration with semaphore-locked cache stampede prevention, RBAC, and Security Officer MOPs. Architected a .NET 9 YARP reverse proxy enforcing zero-trust across complex, intermittent network environments — full-chain ECC certificates, TLS 1.2 scoped to constrained IoT firmware SDK limits, and dynamic Key Vault token injection. Initiated threat modeling for formal penetration testing, including an RFP framework covering Red, Purple, and Blue team operations.
- **Agentic Engineering Practice:** Built and institutionalized a systematic agentic engineering discipline using Claude Code, treating AI augmentation as a rigorous engineering practice rather than a shortcut. Automated ADO backlog management, sprint workflows, and work item state transitions across the team. Designed an agentic red team security testing system and MOP that proactively identifies and resolves critical vulnerabilities before formal audits, avoiding remediation cycles that typically run \$30K–\$100K+ per engagement.
- **Team & Delivery Leadership:** Managed offshore contract developers, overseeing technical direction and delivery. Designed blue/green production deployment plans covering DNS, SSL, certificate, and breaking change management — paired with IoT OTA rollout MOPs for customer-specific deployments. Filled an early cross-functional leadership vacuum, building the V0 Figma design system and driving product direction before dedicated UX and product ownership arrived; coached both on structured development workflows and backlog operations.

Perficient, Inc. — DENVER, CO

Technical Architect — Full-Stack .NET Architect | JUL 2023 – MAR 2025

Directed solution architecture and full-stack delivery across client engagements spanning mobile, web, and backend systems — owning pre-sales estimation, cross-platform implementation, and technical direction for delivery teams. Maintained two direct reports, actively coaching senior developers toward technical architect career tracks. Recognized as the company's internal authority on .NET MAUI, regularly called in to stabilize client engagements navigating Xamarin-to-MAUI migrations, most notably the Caterpillar (CAT) Rentals application.

- **Key Engagement — MassVirtual (MassXR uLCMS) | Jun 2024 – Jan 2025:** Joined as backend technical architect for a high-stakes Air Force/DoD learning platform, leading a global team of 8 developers across backend and Windows UI (Flutter) tracks while collaborating closely with UI/UX. Designed the API architecture, implemented real-time event communication via SignalR, and owned DoD/STIG compliance end-to-end. This engagement marked the first production deployment of mTLS in a constrained, compliance-driven environment — the same pattern and tooling later applied as the authentication foundation for PROCELL InSite at Duracell.
- **Key Engagement — Hollywood Park/SoFi Stadium (Grounds Inventory) | Mar 2024 – Jun 2024:** Architected a real-time digital asset management and repair ticketing system, integrating the MapsPeople SDK to deliver interactive indoor maps with hybrid backend services spanning legacy and modern integrations. Ran user research and focus groups to drive product decisions, and partnered directly with FlutterFlow's internal team as a trusted platform expert. The real-time mapping, device location, and hybrid service integration patterns built here became direct inputs to the architecture later developed for PROCELL InSite.

Lead Technical Consultant — Lead Mobile Developer | MAY 2021 – JUL 2023

Led cross-functional development teams delivering enterprise mobile experiences, including an IAC award-winning consumer application. Architected a white labeling solution that enabled a major automotive brand to reuse a single mobile codebase across its entire brand portfolio — a pattern that scaled across subsequent engagements.

- **Key Engagement — GM Financial MyAccount Mobile:** Served as technical architect and delivery lead for a consumer iOS/Android application serving millions of GM Financial customers, achieving 144,000 downloads within the first three months of launch. Operated within a 70-person cross-functional program, directly managing a ~20-person engineering team spanning Perficient and client personnel. Ran interviews, coached talent across skill tracks — moving manual testers into automation engineering and automation engineers into mobile development — building durable capability within both teams. Architected a cost-driven migration from Splunk to a centralized Firebase Analytics and Azure Application Insights stack, eliminating exponentially growing logging costs while consolidating distributed system telemetry across the platform.

Senior Technical Consultant — Senior Mobile Developer | DEC 2019 – MAY 2021

Deepened cross-platform mobile expertise with Xamarin and .NET, owned Azure DevOps CI/CD pipelines for secure automated builds, and designed mobile test automation frameworks that were adopted as standard practice across client engagements.

Technical Consultant — Mobile Developer | JAN 2019 – DEC 2019

Delivered enterprise iOS and Android solutions for large clients, built CI/CD pipelines for automated cross-platform mobile releases, and mentored junior developers and QA engineers — translating engineering best practices into team growth on both the agency and client side.

Associate Technical Consultant — Front-End Developer | NOV 2017 – JAN 2019

Built foundational expertise across iOS, Android, and .NET, earning Xamarin Certified Developer and Pluralsight Angular Expert certifications. Contributed to internal tooling and developed an Angular/Azure proof of concept for cross-BU resource matching, integrating Google Maps API and Azure backend services.
